Professional Summary

Full Stack Developer with hands-on experience building backend systems, RESTful APIs, and data-driven applications using Java, Python, and SQL/NoSQL databases. Comfortable working across relational (MySQL, PostgreSQL) and NoSQL (MongoDB, Redis) data stores, with AWS and Docker/CI-CD exposure. Interested in applying this backend and data-handling foundation to data engineering and analytics pipelines.

Technical Skills

Languages: Java, Python, SQL, JavaScript, HTML5

Data & Databases: MySQL, PostgreSQL, MongoDB (NoSQL), Redis, RESTful API design, data modeling

Backend: Spring Boot, Spring Security, Node.js, RESTful APIs

Cloud & DevOps: AWS, Docker, Jenkins, Git/GitHub, Maven, CI/CD

Frontend: React.js, Redux, Bootstrap, Next.js

Projects

PadhaiXpress — *Spring Boot, React.js, MySQL, Google Forms API, Razorpay, Supabase*

- Built and deployed a digital academic printing platform serving 1,000+ users and 500+ orders, designing the backend data flow for the end-to-end document printing and ordering workflow.
- Implemented location-based search and query handling using Google Forms API, processing 1,000+ queries with sub-200ms response time and improving user engagement by 45% — focused on efficient data retrieval and response optimization.
- Integrated secure payment gateway and appointment booking logic, reliably processing 500+ transactions with structured data validation and error handling.

Education

B.Tech in Computer Science

2023 – 2027

KL University, Andhra Pradesh — CGPA: 8.23 / 10.0

Final Year Project: PadhaiXpress — a digital academic printing platform serving 1,000+ users and facilitating 500+ orders.

Certifications & Achievements

- AWS Certified Cloud Practitioner — Amazon Web Services
- Oracle Certified Java Programmer (OCJP) — Oracle Corporation
